Furhat Demo

My Furhat demo starts with attending the user. I don't really see the difference with Furhat behaviour but in *Open Web Interface* it's visible that the attention was successful. After greeting utterance Furhat is showing eye-rolling gesture. To prevent overlap of this gesture and second utterance I added *Delay* state. After second utterance in which Furhat announces upcoming gesture, robot present shaking head with disgust. The second gesture also includes a sound of disgust. I uploaded WAV file on GitHub and fed the URL to the fetching Furhat function.
